

Part B: Heat of Neutralization ($\text{H}_2\text{SO}_4 + 2 \text{NaOH} \rightarrow \text{Na}_2\text{SO}_4 + 2 \text{H}_2\text{O}$)

Safety: goggles; acid & base are corrosive.
All waste → waste beaker → fume hood container.

Part D: Specific Heat of a Metal

$$c_{\text{metal}} = q_{\text{metal}} \div (m \times \Delta T_{\text{metal}}), \Delta T_{\text{metal}} = T_f - 100.0\text{ }^{\circ}\text{C}$$
